

The device has two type-c interfaces,as is shown in the figure:

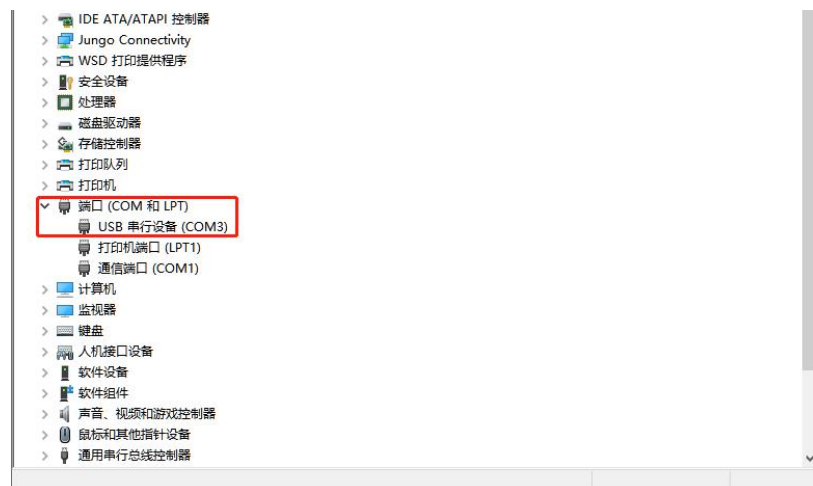

If the PC usb port voltage is enough,you can connect it as shown below figure:

If the PC usb port voltage is not enough,you can connect it as shown below figure:

Then you can find serial port name in the device manager,as shown below figure(Windows10):

1. Windows10:"Control Panel" -> "Device Manager" -> "COM And LPT",and you will see the port name such as "COM1",then change the port name in the code.
2. MacOS:open the Terminal and run the script"`ls /dev/tty.*`",and you will see the port name such as "`/dev/tty.usbmodem1431`",then change the port name in the code.
3. LinuxOS:open the Terminal and run the script"`ls /dev/ttyUSB*`",and you will see the port name such as "`/dev/ttyUSB1`",then change the port name in the code.
